A thousand pities that the multitudinous wheels, and cranks, and pinions of human society, which often so ruinously break, or hideously crack, could not, for at least one diurnal revolution, as smoothly and harmoniously move as the complicated machinery of the paper mill.

M. Emory Wright, *The Parsons Paper Mill at Holyoke, Mass.* (Springfield, Mass., 1857), p. 20.

INTRODUCTION

The story of American papermaking encompasses manufacturing history, family and local history, book arts, printing and technology history, also paper distribution and, by extension, the stationery trade. The current bibliography attempts to identify a broad range of literature to aid historians and all other researchers in the study of the formative American paper industry through the year 1900.

The 7,826 entries represent a highly analytical approach to identifying relevant information embedded within books, pamphlets, theses and dissertations, periodicals and newsletters, as well as selected unpublished typescripts and a few dozen of the more informative Internet resources (if dated at all, some sites may be later than 2013).

Mills, Men and Machinery: A Bibliography of Papermaking in the United States During the Industrial Revolution to 1900 is the product of more than twenty-five years of collaborative research drawing on the rich collections of American libraries. The compilers were drawn to papermaking as a research area out of a sustained interest in print culture, an emerging field of interdisciplinary study.

Paper. Paper. Paper. We're inundated by paper, we take it for granted, we sometimes save it and other times we trash it as just another consumer disposable. Having progressed beyond clay tablets, civilization as we know it would not have been possible without the written word, hence the undisputed role of paper and written records to document and transmit intellectual history, creative thought, as well as discoveries, news, and humor. Consider the key role of paper in civilization's advancement:

"Paper is one of the simplest and most essential pieces of human technology. For the past two millennia, the ability to produce it in ever more efficient ways has supported the proliferation of literacy, media, religion, education, commerce, and art; it has formed the foundation of civilizations, promoting revolutions and restoring stability" (Mark Kurlansky, *Paper: Paging Through History*. New York: W. W. Norton, 2016, dustjacket flyleaf).

Publications, even foreign imprints, issued as late as 2013 are included; there are no exclusions with respect to language, though English, for obvious reasons, dominates the field. Literally thousands of local histories, genealogies and biographical compilations, travel guides, corporate histories, as well as the journals and newsletters of historical societies from coast-to-coast were examined.

Every reasonable effort has been expended to verify each and every entry; in cases where this has not been possible (lack of availability on interlibrary loan of special collections materials such as sample books and trade catalogs, for instance), the entry number is preceded by an asterisk. The entries, it should be noted, do not include series information, nor are the publishers given. Alphabetization of entries follows the word-by-word system.

As a courtesy to readers, the owning institutions of the scarcer titles, generally those with three or fewer known holdings, are indicated. The existence of reprint editions is noted (some reprints may be enhanced with an added index or a new introduction; others may omit the plates or the illustrative matter). Be aware that the newer unrevised/uncorrected print-on-demand editions, along with microform reproductions, CD-ROM files, and out-of-print editions widely available today in digital format (e-books), are excluded. Book reviews are generally not included.

The bibliography combines a topical approach with a geographical approach (by state or region), the latter being a logical preference for distributing the entries whenever the subject matter, as in a paper mill with a known location, can be determined. A study that mentions paper manufacturing in more than one state might be placed in the section for the first-named state or, in a case of a more detailed text introducing numerous mills and their owners in many states, in the "General Literature" section.

Within reasonable limits, the analytical methodology required for this bibliography suggested early on that the names of papermakers be identified; this extends to their likeness, generally a photograph but sometimes an engraving or a sketch, indicated in the annotations by means of "port." It should be assumed that the studies captured by the present bibliography will often contain views and illustrations of paper mills and their machinery.

Many geographical locations, as in local districts, hamlets, manufacturing villages, and townships, may no longer exist, often because these formerly remote areas were overtaken and consumed by urban sprawl, or formal annexation or because of a new name replacing a former name (Mauch Chunk, Pa., for example, is now Jim Thorpe). Some mill locations in the literature may have been linked to the name of the nearest railroad station and the tracks were later abandoned. Our general practice has been to retain the place names as given in the source texts.

As an aid for research, a list of materials used in papermaking and a list of paper types and goods treated in the entries is provided in the Appendices section.

The Appendix, "Court Cases Involving the Paper Industry," though broadly conceived and extensive, cannot be approached as exhaustive for lower court cases and rulings. The case citations, given without annotations, are derived with few exceptions from the LexisNexis (now called Nexis Uni) full-text federal and state court reporter database with no further verification done by the compilers.

What is excluded from this bibliography? We have omitted from coverage:

- Architectural plans
- Archival records and collections (business and payroll records, ledgers and account books, contracts, letters and diaries, wills, estate inventories)
- Billheads, invoices, waybills, checks
- Business cards and envelopes
- Corporate memorabilia, souvenirs
- Historic preservation nomination forms and applications
- Indenture agreements
- Letterheads
- Maps, including fire insurance maps
- Patent files
- Photographs
- Postcard views

Property deeds, surveys, and plats
Ream wrappers
Stereoscopic views
Stock and bond certificates
Tax assessment records
Trade cards
Vital records, census schedules
Woodcuts, engraved prints, chromolithographs

For this bibliography to remain within manageable proportions, no attempt has been made to comb through city directories and the paper trade press (see the "Paper Trade Journals, Directories, Annuals" section for the range of potential sources for further research). Although many signed articles of obvious historical value have been identified and included, the trade press, filled with articles (perhaps with a byline but quite frequently unsigned) and very brief paper trade news, business notices, price trends, new products, corporate appointments and promotions, technical innovations, obituaries, advertisements, etc., awaits digitization and full text access with enhanced keyword searching. Similarly, no effort has been made to sift through the daily and weekly local press of the nineteenth century for news coverage of paper mill openings and closings, fires, floods, mill worker accidents, ownership changes, and more.

Bibliographic coverage of early American manufacturing and technology represents a terra incognita. This is a daunting task, to be sure, as the literature is far-flung and much of it is buried in city and county histories, many of which were published without an index. In many ways, our coverage of American papermaking only scratches the surface given that locally produced histories, oftentimes written for a popular audience, and modest historical society newsletters, do not enjoy a wide circulation beyond the local area. In the same vein, research libraries increasingly ignore this literature given so many other competing collecting priorities. Needless to say, there is no single indexing and abstracting service that one can turn to for current or retrospective coverage of American manufacturing history and industrial progress.

The work presented here, although detailed and extensive in scope, should not be approached as definitive. We encourage new interpretive studies and deeper research by others in diverse areas such as:

1. Family and local history, including historical atlases
2. Canal, labor, and railroad history
3. Logging, forest resource management, environmental history
4. Historic structures survey reports, industrial archeology
5. Riparian rights, hydropower, river pollution
6. Mill design, construction, electrification
7. Mill machinery and patent history
8. Mill insurance and safety
9. The rag trade
10. Women in the industrial workforce
11. Occupational advancement and mobility
12. Community sociology of mill towns
13. Corporate consolidation, trade associations, trusts
14. Paper trade journalism and advertising
15. Wholesaling and paper distribution networks
16. Packaging industry
17. Stationery trade and office supplies
18. Fine printing, book design, and illustration

19. Graphic arts and communication
20. Sample books, catalogs, price lists

Not to be overlooked are the public documents and annual reports, typically with compiled statistics, issued by state agencies with regulatory functions. The legislative session laws of the states typically contain the acts of incorporation, for example, of manufacturing industries. Regarding state documents, the attention of researchers is directed to the untapped *Index of Economic Material in Documents of the States of the United States*, a detail-filled set of volumes compiled by Adelaide R. Haase for the Carnegie Institution of Washington (Washington, D.C., 1907-22).

Acknowledgments

The sustained work required to research, compile, and prepare this bibliography for publication has been an arduous task consuming more than twenty-five years. Our work was facilitated at a very early stage by an extended visit to the William R. Haselton Library in Atlanta, at the time affiliated with the Institute of Paper Science and Technology; in the intervening years, this specialized collection has been integrated into the Georgia Institute of Technology library system. Periodic visits to the New York Public Library (General Research Division and the Irma and Paul Milstein Division of United States History, Local History and Genealogy) and the NYPL's Science Industry and Business Library yielded numerous discoveries from these in-depth collections.

Library staff at the Forest History Society (Durham, N.C.) responded graciously to verification requests. The interlibrary loan and photoduplication service provided by scores of libraries assisted in untold ways to the project's successful completion. Lastly, the vast, fabulously diverse collections of the American Antiquarian Society supported our on-site verification work in incalculable ways, especially with respect to local history.

- 0610 "John Edson Sweet." *Journal of the American Society of Mechanical Engineers* 38 (1916): 473-77.

A necrology. Sweet invented a prototype of a typesetting machine, one that remained unperfected even though it was well-received in 1867 at the Paris Exhibition: "It operated like a typewriter, the keys making an impression on a continuous paper pulp matrix, from which the stereotype plates were to be cast" (p. 475).

From an earlier appreciation of Sweet, we learn: "He was the inventor of one of the pioneer machines intended for the purpose of superseding the use of movable type. It was a step in advance toward the modern linotype machine now in common use" (William Martin Beauchamp, *Past and Present of Syracuse and Onondaga County, New York* . . . (New York, 1908), vol. 2, p. 409).

"He had been informed that so much clay is used in the manufacture of paper at the present day that their preservation for a century is extremely doubtful. He thought that it might be advantageous for the Society to make some arrangements with the publishers of the leading journals for the printing of a few copies of each issue on material that could be preserved."

PAPER TRADE JOURNALS, DIRECTORIES, ANNUALS

N.B. Dating is not based on a direct examination of extant files. Information about some titles is derived from Frank Luther Mott's *A History of American Magazines*, 5 vols. (Cambridge, Mass., 1930-68), and library cataloging records.

Not to be overlooked is the *N. W. Ayer & Son's American Newspaper Annual* (Philadelphia, 1880-1909), listing the paper trade press in its "Trade & Miscellaneous Publications" section (see, for example, p. 1283 in the volume for 1893/94).

In addition to providing current paper trade news, both national and local, the periodicals are contemporary resources for display advertising placed by paper mills, paper wholesalers and distributors, also by manufacturers of papermaking machines, mill supplies and equipment.

1895 Delaware. State Board of Health. *Report*. Dover, Del.

See Fifth biennial report ending June 30, 1888, published as Appendix E in *Journal of the House of Representatives of the State of Delaware, at a Session of the General Assembly Convened and Held at Dover on Tuesday, the First Day of January, A.D. 1889 ...*

Dr. L. [Lewis] P. Bush reports on a linkage between imported infected rags and new cases of smallpox among Wilmington's paper mill workers. He stresses the increased need for shipboard disinfection of rags, as mandated by Treasury Dept. regulations (1884), and the quarantining of infected people. The report singles out the "Augustine mills on the Brandywine." See Appendix E, pp. 223-25 (includes text of an approved resolution to be sent to the Treasury Dept.).

See also the *Daily Republican* (Wilmington), Dec. 14, 1887, p. [1], "State Board of Health."

The Eighth biennial report (1892/94) summarizes an inspection visit to the Jessup & Moore Paper Co., Rockland, and notes the mill's unacceptable pollution discharge, including kitchen garbage and human waste from the privies, into the Brandywine (pp. 43-44).

The sparse biographical section devoted to E[ugene] Hatch (pp. 94, 139) indicates that his pulp mill was located on the former Mitchell Mill site at River Hill, near Sparta. It is unclear if he intended to move the mill to a new building at Sparta but if so, the project never materialized in 1885 for lack of funds.

A different account with later dating appears in Lewis M. Hatch's *Branches of Our Family Tree. With Charts* ([n.p.], c1938), leaf 12; the author locates Eugene at River Hill as

of 1892, then leaving the area and returning to Wisconsin in 1895

In 1872, George Hunter set out to start a paper mill at Fond du Lac; it is unclear if it became operational owing to poor river water quality. His new drilled well was demonstrated to be a source of underground magnetized water (p. 17).

George developed on the property Hunter's Magnetic Fountain, "a sanatorium with bathhouses and reception room," per Ruth Shaw Worthing, *The History of Fond du Lac County, as Told by Its Place Names*, 2nd ed. ([n.p.], 1976), p. 51.
